

PARTNER WITH US · LAMKO.CO.KR/PARTNER

Join the LAMKO partner network

For manufacturers, CROs and purification facilities.

LAMKO brings pre-validated advanced-materials projects to qualified facilities. Rather than chasing enquiries, our partners receive **scoped work with defined chemistry, specifications and quality expectations**, supported by our own process development, purification and analytical capability.

Partner tracks

Contract Research (CRDMO)

Route scouting, feasibility and laboratory-scale development work.

Development & Manufacturing (CDMO)

Process development, technology transfer, pilot and scale-up campaigns.

Contract Manufacturing (CMO)

Repeat production of defined materials at agreed specification and volume.

Purification services

Sublimation, crystallisation and isolation capability for electronics-grade work.

What we look for in a facility

- ✓ **Chemistry and equipment fit.** Reactor configuration, handling capability and the reaction types you run routinely.
- ✓ **Quality systems.** Documented procedures, change control, batch records and traceability.
- ✓ **Capacity and lead time.** Realistic available capacity and honest scheduling.
- ✓ **Contamination control.** Particularly for electronics-grade and high-purity work.
- ✓ **EHS and regulatory readiness.** Safe, compliant operation is a precondition, not a bonus.
- ✓ **Cost structure.** Competitive, but never at the expense of specification or reliability.

Every partner is assessed through a **38-point technical audit** before any project is placed. Once qualified, LAMKO embeds quality engineering oversight so expectations are clear on both sides and issues are resolved technically rather than commercially.

How to apply

Open the partner page and choose the track that matches your facility, CRDMO, CDMO, CMO or purification. Complete the capability form covering your chemistry, equipment, quality systems and capacity. Our technical team reviews every submission and responds with next steps, which normally begin with a technical conversation and a facility assessment. Discussions proceed under NDA.

Apply online

Become a LAMKO partner

Pre-validated projects, technical support, long-term supply relationships.
